

The HTML excerpt looks thus:

```
<div class="boxBody">
  <div id="page_home" class="page show">
    <div id="slider" class="show">
<h1>Put some stuff here for the home page</h1>
    </div>
  </div>

  <div id="page_galleries" class="page">

<h1>This is where we put the stuff for the Galleries page!</h1>
  </div>

  <div id="page_services" class="page">
<h1>This is where we put the stuff for the Services page!</h1>
  </div>

<div id="page_about" class="page">
  <div id="aboutContent">
    <div id="aboutContentImg">
      <p>Put an image here</p>
    </div>
    <div id="aboutContentTxt">
<h1>This is where we put the stuff for the About page!</h1>
    </div>
  </div>
  <div id="aboutImg">
    <h2>This is some image</h2>
  </div>
</div>

  <div id="page_proofs" class="page">
<h1>This is where we put the stuff for the Proofs page!</h1>
  </div>

  <div id="page_contact" class="page">
<h1>This is where we put the stuff for the Contact page!</h1>
  </div>

</div>
```

The ready function is:

```
$(document).ready(function() {

  //Get all the LI from the #tabMenu UL
  $('#tabMenu > li').click(function(){
```

```
//remove the selected class from all LI
$('#tabMenu > li').removeClass('selected');

//Reassign the LI
$(this).addClass('selected');

//Hide all the DIV in .boxBody
$('.boxBody div.page').slideUp('1500');

//Look for the right DIV in boxBody according to the Navigation UL index, therefore, the arrangement is very important.
$('.boxBody > div:eq(' + $('#tabMenu > li').index(this) + ')').contents().andSelf().slideDown('1500');

}).mouseover(function() {

//Add and remove class, Personally I dont think this is the right way to do it, anyone please suggest
$(this).addClass('mouseover');
$(this).removeClass('mouseout');

}).mouseout(function() {

//Add and remove class
$(this).addClass('mouseout');
$(this).removeClass('mouseover');

});

});
```
